CHRISTOPHER KSIAZAK
SOFTWARE ENGINEER

Summary

I'm a developer born and raised in El Paso, TX. I enjoy learning new technologies and applying that knowledge in designing and creating things that live on the web. For over a year, I attended Lambda School for Full Stack Web Development. and have worked with various distributed teams of different skill sets (ranging from Data Science to UX design, as well as other developers) and designed, researched, built, and iterated over several products. Afterwards, I started working with Ariana Suisse SA and was offered the opportunity of implementing a distributed service system using various Typescript technologies, of which I had to learn as needed. At the same time, I was offered my position back at E-Dealer Direct, in which through proper time management, I was able to complete both tasks as needed and without delay.

Before that, I focused on both the support side of a SaaS application as well as analytics. I mainly assisted in identifying ways that we could improve product design and issue resolution time to deliver better customer support to both end users and clients.

Employment

E-Dealer Direct
Software Engineer
El Paso, TX
July 2020 to Current

As life semi-returns to normal due to the current COVID-19 situation, I was asked to return to my position at E-Dealer Direct. In my current role, I operate both across the full stack and mobile development. My typically day to day technologies in use are React, React Native, Redux, SCSS, And Ruby on Rails. I lead product team discussions, and push out updates in a regular and timely manner, while both taking feedback on the current release and working on the next.

Ariana Suisse SA
Software Engineer (Contract)
Remote
May 2020 to Feb. 2021

In my partnership with Ariana Suisse, I'm the lead developer on creating a multi-tenant, distributed system using React (& React Native), GraphQL, Apollo Federation, Styled Components, Typescript, Elasticsearch, and various AWS services. Through discussions with clients, I continually create new features or reiterate on old ones. This is done completely remote across global time zones.

E-Dealer Direct
Software Engineer
El Paso, TX
Mar. 2020 to Apr. 2020

Although not long, I joined E-Dealer Direct and served as part of the core engineering team. In my time there, I contributed to stack discussions in an agile environment, created wireframes and mockups using Figma, and planned and developed new features using React, Redux, SCSS, Javascript, and Ruby on Rails. Unfortunately, due to COVID-19, I was made redundant.

C3i Solutions
Project Coordinator
El Paso, TX
Mar. 2017 to Current

- Worked in conjunction with our client, Castlight Health, across several time zones
- Transitioned our program through several of our client's product launches
- Maintained knowledge base with current issues
- Triaged bug reports to appropriate engineering teams
- Made data driven decisions through various reports from Salesforce and JIRA
- Analyzed flat files and API requests from Anthem
